

ASP's — SAAS — Cloud Computing

Application Service Providers, Software as a Service

GHA is at the forefront of selling ASP services. Application Service Provider's are businesses that provide computer-based services to customers over a network. ASP's provide small and medium size businesses access to enterprise level equipment and professional services on hot standby via toll-free phone access. These types of services charge a monthly licensing fee that is determined according to the number of users and required amount of data. Because this solution is shared by many different companies and users, the cost for enterprise level solutions becomes minimal.

- Enterprise level equipment access
- Affordable licensing fees for small to medium businesses
- Access to enterprise level service and support professionals
