Have Waste Batteries? We Have Your Solution.

Our Corporate Mission

We strive to protect human health and the environment by offering battery recycling solutions for businesses, government and households. These battery waste management programs help companies and environmentally conscious consumers meet their environmental, health, safety and recycling objectives. Our success is a result of our knowledge, expertise, dedication and most of all passion for what we do.

Our Promise To You

We're dedicated to making your job easy by relieving you of all battery waste recycling responsibilities and concerns, including battery collection systems, packaging, transportation, logistics, environmental health issues and adherence to all federal, state and local regulations.

Customized Recycling Solutions

We accept every chemistry and quantity of battery, from corporate, government and residential customers on a nationwide basis. We handle the logistics for you too, from pickup, transportation, and sorting, to proper recycling and "cradle to cradle" paper-trail documentation. We take care of the entire process for you.

From a Small Box to Multiple Truck Loads...

We Implement Battery Recycling Programs of All Sizes Nationwide

Welcome to Battery Solutions

We provide cost-effective turnkey battery-recycling systems of all sizes to corporate, government and residential customers across the country to serve environmentally conscious consumers and satisfy compliance with government regulations.

Your Issue Is Our Issue

We work with you on a job by job basis or via a recurring recycling system to handle your waste battery issues — large or small. We use our knowledge, experience, and dedication to provide solutions that are specifically designed to help you easily meet your environmental, health, safety, and law-compliance objectives.

Our Four Simple Systems

Our four easy-to-use systems cover all battery-recycling situations:

1. Bulk Large Quantity Recycling – See page 5
2. Un-interruptible Power Supply (UPS) Battery Recycling – See page 7
3. SmartRecycle System – See page 9
4. iRecycle Kits – See page 11

We also recycle cell phones, printer cartridges, computers, computer monitors, fluorescent lamps, bulbs, and all types of electronic scrap. (See page 14.)

Why Recycle?

Each year billions of used batteries are deposited into solid waste landfills in the United States, causing unnecessary heavy metal contamination to our planet. Demand for batteries in the U.S. is projected to increase substantially year after year. Battery Solutions, Inc. is committed to helping advance a cleaner sustainable environment for present and future generations through the vital role our company has in the recycling process.

Our Comprehensive Battery Recycling Systems and Services

We Accept All Types and Quantities of Batteries

Bulk Quantity Recycling

Perfect Solution For: Corporations, governments, municipalities, schools, medical, commercial, retail, transportation, telecommunications, biotechnology, residential, and more.

Battery Type: All sizes — motive power, stationary power, industrial use, and consumer use (dry-cell and/or wet cell).

Project Size: By the truckload (partial or full), per job, or project specific.

And More!

We also recycle cell phones, printer cartridges, computers, computer monitors, lamps and all types of e-scrap. See page 14 for details.

Un-interruptible Power Supply (UPS) System Battery Recycling

Perfect Solution For: Corporations, governments, municipalities, schools, medical, commercial, retail, transportation, telecommunications, biotechnology, and more.

Battery Type: All sizes of back-up power, Un-interruptible Power Supply (UPS) batteries.

Project Size: By the truckload (partial or full), per job, project specific, or de-installation.

We Handle All Logistics

We arrange the removal and transportation for larger jobs, and we can send you a pre-paid shipping container that includes the cost of recycling and the transportation. Plus, we handle all necessary paperwork, so you don't have to.

SmartRecycle System

Perfect Solution For: Corporations, governments, municipalities, and more.

Battery Type: High-volume, small-size, dry-cell batteries, as well as cell phones and other portable electronic devices.

Project Size: Pails and boxes.

Be Positive

When you recycle your batteries, you're not only keeping in compliance with all federal, state and local regulations, you're also managing your waste stream properly, limiting your exposure to liability, and setting a good environmentally-conscious example for everyone.

iRecycle Kits

Perfect Solution For: Corporations, governments, municipalities, households, and more.

Battery Type: Small-size dry-cell batteries, as well as cell phones and other portable electronic devices.

Project Size: Pails and boxes.

Dry vs. Wet

The process for transporting and recycling dry-cell batteries is different from that of wet-cell batteries, so it's important to know the difference between the two. Dry-cell battery chemistry types are: alkaline, zinc carbon, nickel metal hydride, dry-cell nickel cadmium, lithium ion, lithium primary, mercury, silver, and sealed lead acid (non-spillable). Examples of wet-cell batteries include: automotive and stationary-power lead acid, marine, motorcycle, lawn and garden, and large flooded lead acid back-up power batteries. Another example of a wet-cell battery would be wet nickel-cadmium batteries often used in backup power, telecommunication, and railroad switchgear applications.

Bulk Quantity Recycling

Big Solutions for Large Projects

Whether you're looking to recycle a warehouse full of industrial-size batteries or a mountain of small household-type batteries, Battery Solutions will accept any battery of any quantity in any mixed and matched state.

We also accept large quantities of "e-scrap", such as circuit boards, cell phones, portable electronics, and all other types of universal waste. And, we'll handle all of the logistics including: pickup, shipping, delivery, sorting, and recycling.

Sample Situation

You're in charge of collecting household hazardous waste for your county or community and you're accumulating multiple drum loads of dry-cell batteries. Give us a call for a competitive price quote. We'll take the batteries off your hands and recycle them properly.

PERFECT SOLUTION FOR:

Corporations, governments, municipalities, schools, medical, commercial, retail, transportation, telecommunications, biotechnology, and more.

BATTERY TYPE:

All sizes — motive power, stationary power, industrial use, and consumer use.

PROJECT SIZE:

By the truckload (partial or full), per job or project specific.

Un-interruptible Power Supply (UPS) Recycling

With Our Help, Your Workload Remains Uninterrupted

Because UPS batteries contain lead and sulfuric acid, they're considered a biological hazard. As such, these batteries are illegal to dispose of without following the guidelines put forth in the Resource Conservation and Recovery Act (RCRA) enacted in 1976.

It's our business to know the laws and guidelines and how to legally and safely recycle your UPS batteries. We're federally and state permitted. And we provide the documentation you'll want to keep on file to show your batteries were properly recycled.

Our UPS battery recycling services include: de-installation, rigging, removal, logistics, transportation, storage, and recycling.

Sample Situation

It's time to change out the strings of batteries used in your facility's UPS system. Give us a call. We'll perform de-installation, packaging, transportation, storage, recycling, and documentation for you and make your job easy.

PERFECT SOLUTION FOR:

Corporations, governments, municipalities, schools, medical, commercial, retail, transportation, telecommunications, biotechnology, and more.

BATTERY TYPE:

All sizes of back-up power, Un-interruptible Power Supply (UPS) batteries.

PROJECT SIZE:

By the truckload (partial or full), per job, project specific, or de-installation.

SmartRecycle System

A Smart Battery Recycling Action Plan

Many facilities have implemented battery recycling systems as part of their pollution prevention efforts. In doing so, they're helping to protect the environment, and insuring compliance with environmental laws.

Battery Solutions has researched and implemented turnkey battery recycling systems for corporations, organizations, municipalities, and government agencies throughout the United States, and these entities have found the system to be most beneficial.

Why?

Because the system is easy to implement and logistics management is handled by Battery Solutions. It also helps facilities maintain an inventory of the batteries procured, used, recycled, and reclaimed. And the system's measurement is quantifiable, because Battery Solutions can compile spreadsheet reports that list the different chemistries of spent batteries collected from the facility.

Sample Situation

Let's say you're an environmentally conscious company and you'd like to put a used battery collection plan in place. Simply call or e-mail us to sign up for the SmartRecycle System for your workplace. There, employees can leave used batteries for easy return to Battery Solutions.

PERFECT SOLUTION FOR:

Corporations, governments, municipalities, and more.

BATTERY TYPE:

High-volume, small-size, dry-cell batteries, as well as cell phones and other portable electronic devices.

PROJECT SIZE:

Pails and boxes.

Features: UN-Approved collection containers, EPA approved recycling of all materials, Certificates of Recycling, recycling instructions and awareness posters, automatic reordering, next-day shipping with online tracking, and online pick-up request.

iRecycle Kits

An Easy Way to Recycle Batteries

Battery Solution's iRecycle Kits make it easy for companies, municipalities, and individuals to properly recycle their batteries. You simply order a recycling container that best suits your needs and fill the container with used dry-cell batteries of all kinds. We handle the rest.

Battery Solutions arranges for pick up of the full container, and we sort and recycle the batteries. It's as easy as that.

Sample Situation

You own a small retail business and you'd like to create more foot traffic to your store. Simply order a Battery Solutions iRecycle Kit container and place it on a counter where customers can use it to dispose of their personal batteries. With one simple action, you've helped the environment, provided a service for your customers, and increased business.

PERFECT SOLUTION FOR:

Corporations, governments, municipalities and households.

BATTERY TYPE:

Small-size dry-cell batteries, as well as cell phones and other portable electronic devices.

PROJECT SIZE:

Pails and boxes.

Features: Simple three-step process, fully-inclusive recycling product, pre-paid postage included, UN-approved collection containers, two attractive boxes and two pails from which to choose.

Other Recyclables We Handle

Not Sure if We Accept It? Ask Us.

In addition to battery recycling, Battery Solutions handles an assortment of other recyclable items.

We accept computers, computer monitors, and other types of electronic scrap (often called “e-scrap”).

And while fluorescent lights are great for saving energy, they require recycling due to the mercury they contain. We provide environmentally friendly recycling for fluorescent and all other types of lamps.

Finally, as an added benefit, Battery Solutions will recycle your used cell phones, MP3 players, PDAs, other handheld electronic devices, and ink-jet cartridges for no charge. We provide the container and pay all shipping and recycling charges.

PERFECT SOLUTION FOR:

Corporations, governments, municipalities, retail outlets, households and more.

BATTERY TYPE:

Handheld electronic devices, e-scrap, lamps, etc.

PROJECT SIZE:

Pails and boxes.
